143B. Small and Medium Enterprises. BGP119. Place the web server in the DMZ with an inbound rule from the eth0 to eth1 interface to accept traffic over port 80 designated for the webC server. Decrease internal network performance. A contractor is preparing and configuring conference rooms for a conveniã. A technical replaces a client router, and now it cannot ping the ISP gateway. Enable state inspection. the UTMD. Start the Wireless AutoConfig service on the ServicesE console. A new user is reporting connectivity issues. Please refer to the attached. What of the following types of configuration management documentation are represented? Allow remote management. switchd. OSPF575. Which of the following are considered to be most authentication? AAA? inventory?nc. Spectrum Analyzer28. A user's reports are no longer accessible to network resources. Multimeter 251. Incremental backupE. Ann, a new user, cannot communicate on the network from her computer. How do the following options useAa Lisa, a technician, to study network traffic?A. Ao the following options will put a compaAa on the edge of your network if you want to see and control what Internet applications are being used?A. What of the following provide the S level of detail?A. Is the following network topology ONLY possible between two users?A. Do the following cloud models need to identify the technical in the proposal?A. 3389C. Do the following backup techniques are used to capture all data that has changed since the last full backup?A. Firewallc. TTL322. 25 160. Recently, a SOHO office installed a final network for employees to use during meal breaks. 143D. nbstatD. Reliã by nu nu odnaelp. Ate ocinc. At n u .57repahs eteuaqP. acirbmiAlani der au odnarufiqno. Ate der ed ocinc. At n u . acirbmiAlani der al euq elbac rop der al arap sajab sAm agray y agrased ed sedadicolev arsteum dadicolev ed sabeurp ed bew otis IE Strategy to manage routers and switches in a dedicated management network. 8080 149. 7e. The administrator decides to admit 802.11n and 802.11g with a pre-shared key WPA2. Users need to access remote websites and should be able to use SSH to recover files from remote locations. SSH554. Allow the TCP 80C port. DHCP Corruptob server. 802.11ne. Papa-Peapb. Hardwarec Firewalls. Allow any 10.5.0.10 443b. Multimode D. What about the following options should be provided to the user to achieve this? A. IP address in the VLAN NATVAB interface. The requirements include Internet access and access to the Hu A. Spede House that is 100 feet away. Change the SSIDD. VADFOC camera FTFB. DA556. A network administrator wants to ensure that there are no unnecessary open communication routes on a server. Guests must be connected to a separate wireless network using a Guitvob portal. 68D. A company has just installed a new VoIP solution in the cloud, however, users occasionally report poor call quality or dead air. A company finds that many desktops are being reported as missing or lost. VPNB site to site. A technician wants to implement a network that will require the wireless client devices to request a username and a password before granting access to the wireless network. Both fiber SFP is confirmed that they work. A network of networks is creating a new subnet for 488 host machines. A new monitoring device is installed on the network that uses ping to determine if the Internet critical Internet routers are activated. What about the following types of connectors would use Sandy, a network technician, to connect a serial cable? A. Allow 10.5.0.10 443 any. The administrator wants to be able to monitor future attacks in an environment and determine the attack method. A network technician is trying to solve a connectivity problem. A technician has verified that the cables are working properly. authprivB. Of the Should you do the technician to solve the problem?A. NIC537 defective. The security administrator reports that individual systems involved in policy or security breaches or incidents cannot be quickly located. Which of the following should be configured to allow IP-to-name resolutions?A. Router RecordsB. Zach, a technician, wants to test a laptop, but not A any other network computer to connect it to. A's network card. Physical Diagram C. A technician is solving network connectivity problems of a workstation and wants to confirm which switch port corresponds to the wall connector the PC is using. The technician introduces the DHCP information and sets up the SSID. PPTP54. DHCPB area. The logic bomb B. SNMP v2B. UDP port 69 580. 10.8.0.0/20D. There are also three spare Cat 5e cables, which are not in use. GeofencingC. Work order C. 30C. 23 148. Which of the following elements is TOTALLY based on the use of ICMP packages?A. IPC override. UDP port 53 needs to be allowed168. Packets693. Jeff wants to implement a unique wireless network within the business. There are several large, electric, motorized machines installed in the plant to automate the manufacturing process. SpamB filter. IMAPB. A network technician is solving intermittent problems with the quality of VoIP calls. The new switch has a transceiver that accepts a smaller square adapter of two wires. Which of the following protocols uses the MOST MITM attacks?A. Which of the following DNS record types allows IPv6 records to be resolved in DNS names?A. 25E. Enable TLS inspection at the UTMc. M33demF. WEPã IV is too small.B. WEP uses RC4 which is easily accessible and not secure.C. WEP uses plain text.D. WEP is not supported.248. By default, the Primary network is a class A network, while the final network is a class C network. 2001:0d58:95:75:65:1404. A A. Joe, visit a site that has reported a network emergency. An administrator is troubleshooting anal telephonic problems. The network IP addresses were found.192 End users have experienced connectivity issues. What of the following firewall rules is best for you?A. Full Cat 5eC. Saasd Hebidu. Bluetooth F. A user calls support for help setting up a new SOHO router. DHCP reserve for portsUiles A. MACs667. FTP267. Network map B. A network technician receives a new firmware update. A network device. CSMA/CDD. Do the following storage standards have to be used by?A. Power cycle. web340 server. SAND. Cable modemD. Does the following ports need to be enabled in the firewall? Matt, an administrator, notes a flooded fragmented packet and relays from a single e server. Kerberos153. Create a d-inventory database. Bchannel overlay. A technical is connecting a router directly to a PC via interface G1/0/1. No DHCPB server connectivity. 123146. A How useful are the following tools in this scenario?A. The old switch used a GIBC with SC connectors and the new one uses a SFP with LC connectors. UserB permission reviews. SFTPS. MTUD. Base band C. MS-CHAPD. Unintentional DoS386. A router is configured to use RIPv2 to route traffic across the network. A Does the following BEST describe how. A Layer 2 switch works?A. 2.4 GHzB. A Do the following options provide secure access to enterprise resources?A. Loopback adapter682. AWhat of the following port numbers must be the only open port allowed in the firewall to achieve this? A university has a conference room with 100 A. acilipAp tenretal icellitu romij ocinc. A le euq. Aritsuquer oirecrah. A. ograbme nis aserome al ed otomer rotibus la esratcenc atisecon y opnac. le no odnajabart. Ate roinj der ed ocinc. A n u . 632EOP y So od. AAcaruqifnoC. FPTMS the technician is installing a new wireless network for a client. File HashingD. Laboratory SimulationRecently, wireless network users started experiencing speed and performance issues after replacing AP2 due to faulty hardware. The original network was installed according to the specifications of a consultant and has always worked smoothly. You, a network technician, have been given the task of evaluating the situation and solving problems to improve performance and connectivity. Refer to the diagram below and make NEED changes to the wireless and wired infrastructure by adjusting the devices. Note: Adjust the MINIMUM number of devices needed to fix the problem, all blue icons in the image can be clicked. When you feel the simulation is complete, select the Done button. Answer: A. Change speed and duplex settings on AP2 only to 100 and full. A. Change mode to G on AP2. A. Change channel to 6 on AP2. Explanation: Since we know that the network was running perfectly well before replacing AP2, we should start by looking at this new device that was used to replace the old one. Incremental B. Concentrator VPNB. Which of the following diagnostic commands is based on correct forwarding of ICMP ECHO packets?A. After testing the cable, the tester shows a db loss of .9. RG-9B. Patch and updateD. The network administrator is not familiar with the application or how it communicates with the database. After the test, Lisa determines that users reach the maximum at speeds of 802.11g. Allow outgoing UDP port 21B. Port filtering657. Paasc. Which of the following provides two-factor authentication?A. Jeff sees the following information in the configuration of the VLAN 105 address. IP 192.168.105.5 255.255.255.0. Jeff can ping the router at 192.168.105.1 from the switch. The following are the most likely causes of the problem. Changes packets within the same subnet according to MACB addresses. Cuts328. A technician can also make ping on the website. Which of the following is the BEST technology to help in this scenario?A. Which of the following should the technician be updated?A. 10.8.0.0/19C. Which of the following might be the problem with this lack of access?A. Port security306. The user cannot establish a connection to the server, but the error message that appears on the screen does not contain useful information. Apply a stronger password policy and use a manual geometry scan51. Traffic modelingD. Failure tolerance.217. A corporate manager says that wireless phones do not work properly inside the main building. Flood ARPB. Data usage limitsE. MTP57. A network administrator is implementing an IPS on VLAN 1 and wants the IPS to learn what to prevent on its own. Which of the following features should be configured manually? A technician is assigning the IP address space needed for a new remote office. Generate new keys. B. Deactivate unused ports. C. Check the updated firmware. D. Configure the VLAN.534. RolloverC. The optical fiber patch panel uses a torsion style connector. A technician recently fixed a computer with several viruses and spy programs on it and noticed that the Internet setup was configured to redirect all traffic via an unknown proxy. The backup server connects to a NAS device via block-level storage via Ethernet. Which of the following elements should the company implement to ensure excellent television and telephone service?A. SONET504. Which of the following actions would occur immediately if a server had usage peaks above the prescribed value?A. Daa5320. As part of the agreement, the organization will agree on a plan Bandwidth to provide 150 Mbps of bandwidth. What about the following options is created in a 48-port switch with five active VLANs? R. What about the following ports are commonly used to interactively configure a network device? Based on the firm ID5B. Layer switch 2668. Application layer application Which of the following media types can carry a standard Ethernet signal for network connectivity?A. tcpdumpD. Emissions continue to be transmitted and doubled until the amount of traffic causes serious performance problems. RADIUS E server. This is an example of which of the following types of topology?A. 29 452. 802.1Xd. Which of the following is an example of two-factor authentication?A. A network technician is planning to update the firmware on a network router. The technician connects the printer to the network, but is not sure how to determine its switching port. Zach, the network technician, realizes that there is no link light on the NIC user: PTRD. The head office perimeter router connects to remote offices via IPsec GRE tunnels. An attacker has flooded the hardware tables of a switch to forward traffic to the attacker's IP address instead of the default router. netstatB. PTRB. HashB file. Duplex207. Connect to another port C. Public/private networksD. The NIC driver is not installedG. 192.168.12.97 255.255.255.248 686. Enable IEEE 802.1q authentication in the redC interface card properties. Which of the following resources can be used to test this problem?A. Mesh512. Which of the following separates the diffusion domains?A. Which of the following is the most likely to correct the error?A. A network technician is deploying mobile phones for a of A sales staff. MAC175. Add a fingerprint reader to each workstation and provide an RSAB authentication token. The router was configured with an incorrect default gateway. Isolation of APB. Which of the following threats did the network engineer encounter?A. Broadcasting traffic segmentsC. DSLB. Change management documentationE. Filtering. dem660. Change/management. Layer 5D. D. Title C. Load Balancing D. What of the following options should be used to test the theory?A. Tone generator24. Users on the switch can communicate with each other Now you can not access other network segments. A critical vulnerability is discovered in a network device. What about the following is more Likely the cause? A. They are evaluating the feasibility of implementing WPA. The discoverers of a critical step was lost. The company uses the SSID of ABC123, and the SSID of the technician is found by default. MPLSC. The network will consist of 3 access points and a single switch. SSLC. Passphrase342 Authentication. Rip303. Protocols141 Incorrect routing. Disabled Concentrators differ from the switches in which between the two, only Hubs have: A. WPA2B. What about the following subnets would fulfill these requirements? A. A user declares the house of it during a remodeling of basement, one of the workers cut the network cable that goes from the Modem to WAP and nothing else was changed. RDP202. What about the following policies agrees that in the SL? A. Install an IDS to monitor all traffic to and from kiosks. b. Install trap systems on the network to detect and analyze potential kiosk attacks before occur. c. Activate Switchport security in the ports to which the kiosks are connected to avoid attacks. d NetworkLevel. Create a new network segment with ACL, which limits the traffic kiosksã e with the internal Network.610. Replican Ann, a client, has recently updated his SOHO Internet for cable fiber gigabit. An administrator is able to enumerate the interfaces of a switch after providing publishing the community chain a. Puerto Oer and the Analysis protocol. A username provides when the following? A. 192.168.0.55b. 240 private networksD. How about the next access control permissions do you impose on the labeling database at specific levels? A. omnidirectionalD. The laboratory has 25 computers and is connected with a single connection of Gb Ethernet on the Cat 5e cabling to an unmanaged switch. MultimeterF. RG-59 516. /25C. Lisa, a network administrator, has to allow all websites to be accessed by the sales team Business purposes. What about the following frequencies should use the wireless network to minimize this interference? A. The Director of Information (CIO) has noticed that the corporate wireless signal is available in the parking lot. State Inspection456. What about the following policies prohibit a network administrator use spare servers in the data center to the Bitcoins Mão? A. Physico. Samba675. Application710 What about the following concepts would help the technician better? A. Byodd. Enable wireless multimedia (WMM) for QOSB. Callo site 10.233.2.0/23C. MTU size greater than 12000571. A technician executes new plnum network cables from the switch on one side of the 80 meter computer gym (262 feet) to the new offices on the other side, which Send the cables through the light accessories. Disable unnecessary services. b. Use private IP addresses.c. Allow Remote Administration Access.d. Disable the Port.E console. Enable encryption. f. Update at last firmware.527. TTL.D. Data Link. SLA324. Global Parameters of TC. Receive Statement status: Firewall download status Enabled: Reception window AUTOMATIC SETTING LEVEL: Normal supplementary congestion control supplier: CTCP ECN capacity: Disability RFC 1323 Timestamps: Building A final access point. F-connectorC. A network technician is trying to run a protocol analyser and is instructed to log the download status of the TCP fireplace. A. Do the contractor take any of the following actions to ensure that the cables meet specifications and that the network is functioning properly?A. 172.16.20.0/30C. Ingenierãa sociaic. Fingerprintc. A company is experiencing accessibility issues that reach services on a cloud-based system.ã How many of the following monitoring tools should be used to locate potential outages?A. The technician suspects a possible energy problem. SerialID. 2B-D A Can the following options use a third-party back-end LDAP user database for authentication? n?A. Frequency495. Create a port localization diagram?01. A How likely are the following to cause the problem?A. OSPFD misconfigured. Deny source host 1.1.12 on source port 23 to anyD destination. A technical is troubleshooting network connectivity issues with a remote host. A router connected to a 12-port switch configured for the administrator's computers, phones, and printers, and a 12-port switch configured for the other computers, VoIP phones, and CD printer. Training.3 the trafficD. RouterC. A network administrator wants to reduce the scope of a subnet to two usable IP addresses within a class C. StaticB network. Ao the following options helpãa BEST to the Safety to identify systems involved in security incidents? a. Since it is exposed to the public, what about the following steps are the best steps that the technician should take when installing this device? Transported Mac falsifying D. Notes from the version. STARD Router66. The technical technique that when the n of vetting of the camera A is turned off, the ping round-trip time between the camera and the network DVR is always less than 1 ms without packets being downloaded. The system administrator is troubleshooting a problem with the screen that displays unknown, random, and inappropriate messages. A network engineer from a multinational company is asked to buy phones for top executives who usually travel internationally. Preventing loss of dataD. A junior technician is setting up a voice control device so that the CEO can control several things in the office. Physical 449 802.1acC. A technician needs to test the length of an installed received cable because it is believed to exceed the maximum length of specification. A. What of the following options will most likely correct the interference issues in the executive's office? A. Configure WPA2 on all D access points. SubnetC. Ao the following cable types are being tested with. S probability?A. The technician tries to ping a server using the address.ã an AP without success. When testing an ACL on the default gateway router to allow only Web browsing? TCP ports 80 and TCP ports 443 were the only open ports. DNSD. Increase attenuation.ã n177. TransportE. A company is connected to an ISP, but owns the local router with an internal CSU/DSU. Dãplex C. Still adding a fingerprint reader and retina C scanner. A network technician is segmenting the network traffic into several broadcast domains.ã n. A Do the following ports need to be blocked in the firewall to achieve this?A. RelãE of the D frame. AõU of the following addresses is a class B?A private address? SLA570 - A company has attempted to introduce a major new network segment to enable capacity growth. BinaryD. A network technician warns a router that repeatedly restarts. ConvergenceD. allow up any 53D ep. Channel.ã315. DDoS attacks target multiple B-networks. D. DHCPB ring. Given this information? information,ã, the technical one likes to analyze all the TCP handshake.ã HTTP requests outside the line. ST to E.ã How many of the following final encryption standards will be the most appropriate for the S HIGH level of security?A. Ao are the following devices most often responsible for 1q labeling? CSU/DSU506. A new building needs to join an existing network, but management has decided that the fiber running is too expensive. Frame Diagram B. The technician wants to make sure that the file has not been tampered with.
